PROFESSIONAL PROFILE

Full Stack Developer with experience designing, developing, and maintaining web systems in production for public institutions and companies. End-to-end experience, from requirements gathering and data modeling through deployment and maintenance, with a particular interest in backend development, business rules, and domain problem-solving.

TECHNOLOGIES

Frontend: React, TypeScript, JavaScript, TanStack Query, Material UI

Backend: NestJS, Node.js, REST APIs, WebSockets

Data: PostgreSQL, TypeORM, Prisma

Cloud / DevOps: Docker, AWS (Lambda, RDS, S3, CloudWatch), Railway, Vercel

Tools: Git, GitLab, GitHub, Swagger/OpenAPI, Postman

EDUCATION

Universidad Nacional del Chaco Austral

University Systems Analyst — Degree pending

Information Systems Engineering — In progress

PROFESSIONAL EXPERIENCE

Full Stack Developer — Chaco Ministry of Health

Subsecretaría de Articulación Sanitaria | 2024–2026

End-to-end development of a system for the management and traceability of sensitive medications, designed for the healthcare network in the interior of Chaco and used in production by 4 reference hospitals and 5 regional distribution services.

- Designed and implemented transactional management of inventory, dispensing, and transfers between facilities, preserving traceability through detailed movements and audit records.
- Automated the entry of delivery notes by parsing structured PDFs, identifying medications, presentations, quantities, batches, and expiration dates, with human validation before persistence.
- Implemented authentication and authorization by role and facility, data validation, and concurrency control for critical dispensing operations.
- Developed and maintained the solution end-to-end using React, TypeScript, NestJS, PostgreSQL, and TypeORM, deployed on Vercel, AWS Lambda, and RDS.

Full Stack Developer — Municipality of San Bernardo

2023–Present

Development and maintenance of a social assistance request management system used in production since 2023, with more than 4,000 requests registered.

- Designed a multi-stage workflow to collect personal, family, housing, and socioeconomic information, with persistence and recovery of requests in progress.
- Implemented private document management using Amazon S3 and signed URLs, automatic PDF generation, roles, and document tracking through the completion of each request.
- Responsible for full-stack development, deployment, evolution, and maintenance of the application.

Developer — Systems Department, Universidad Nacional del Chaco Austral

2021–2024

Development and maintenance of institutional systems as part of a 6–8 person team.

- Developed features and improvements for institutional applications, working both on new development and on existing production systems.
- Gathered and refined requirements with university users and departments, translating operational needs into features.
- Worked collaboratively using Git/GitLab and development branches, integrating changes with other developers.

FEATURED PROJECT

Document Management System for Vehicle Sales and Purchases

Freelance project | 2024

- Automated document generation from existing PDF forms, implementing positioning, measurement, and dynamic text adaptation to the available space.
- Implemented review and validation workflows with real-time notifications via WebSockets and access control by role and branch.
